Dear Council Members,

With the matter of road widths before you, I thought a summary of data from Development Services alongside TLI data would be helpful. I have also included an expanded map view of the South Hills neighborhood and the network of roads that gives them 11 routes to get to a main road. There is also a correction of the road width of Macie Way. Territorial Landworks reported it as 24.3 feet but we got an average of 29 feet 3 inches. It seems important to note this discrepancy because they were trying to make a point.

See attached pdf

Thank you.

Sincerely,
Teresa Jacobs

P.S. Sorry to not get this to you earlier - had all kinds of technical challenges (those photos!)
