Deadline:	Click or tap here to enter text.

Background and Alternatives Explored:

Missoula Water is proposing to hire Woith Engineering, Inc for the design and construction administration of a water main replacement project in Beckwith Avenue. This project will replace approximately 950' of six-inch water main in Beckwith from Woodford to Rollins Street. A small section of this water main is steel pipe from 1947 and the remaining is kalmein from 1914. Both of these segments of pipe are identified as priority replacement mains. This project was identified with collaboration with the City Streets Department who has plans to replace the asphalt. This project will allow this old water main and services to be replaced before the street project and minimize the chance that the new asphalt needs to be torn up to repair leaks.

Financial Implications:

\$75,185.00 from the Water Enterprise Fund
