Re: Rebecca Donnelly Proposed Subdivision, East End of Landons Way (Parcel ID 04209305123050000)

This proposed subdivision is quite unique in that its property line is the border of the High Park Conservation Area, making it an extension of the sloping terrain of the Conservation Area. In fact, the backyards of the proposed houses would butt directly up to the Conservation Area. This gem of combined open space can be seen from across the valley floor. It is a tree-filled wildlife corridor housing deer, raccoon, fox, a great horned owl, and is yearlong habitat for birds and small animals.

We have lived at 1204 Landons Way for 15 years. We walk our dogs regularly throughout the area of the proposed subdivision and the conservation area. Please don't discount our comments by characterizing us as NIMBYs. We are not driven by self-interest nor are we opposed to development. That said, we will be significantly affected by the rerouting of our quiet street and the construction of 16 new homes. As presented to us by IMEG, this proposal has consequential problems that need to be addressed.

1. Intersection of Woodbine and Hillview

Screenshot #2 below shows the intersections of Hillview / Black Pine and Hillview / Woodbine. Note the dramatic difference in the curb radius and corner clearance. The curb radius at Woodbine and Hillview is not large enough to accommodate two cars entering and exiting at the same time. With the dramatic increase in traffic anticipated by major development above us on Hillview, this intersection, already dicey, is going to get worse. Numerous times in the past, cars have missed this curve and collided with street and stop signs at Hillview and Woodbine, sometimes ending up high centered on private property on the corner.

Because of the steep slope, the car traveling downhill on Woodbine has to stop well away from the intersection in order to allow the car making a left turn onto Woodbine from Hillview to enter. In winter the incoming car has to hope that it can avoid both people speeding down Hillview and accumulated snow and ice as they make the left turn onto Woodbine. (Ironically, just this morning as I was driving down Woodbine I had to drive up on the sidewalk to accommodate a car turning left from Hillview because of snow and ice.) This is a daily issue in good weather that the neighbors have learned to accommodate for by being conscientious, but snow and ice exacerbate the problem significantly because of the corner clearance and the steep grade of the street. As you can see from the photos below, the intersection turns into a steep one-lane street when exiting Hillview.

2. Traffic Conditions on Landons Way / Woodbine

Our neighborhood does not have access to public transportation. Everyone travels by car. As proposed, Landons Way is the only entrance/exit to the new subdivision. IMEG estimates that on average each household generates 8 one-way trips per day (TPD), defined as the total number of trips, both inbound and outbound in a 24 hour period. Going to the store = 1 TPD. Returning = 1 TPD.

That very conservative estimate doesn't include multi-vehicle households, trips per day made by visitors, deliveries, trash pickup, snow removal, people accessing the conservation area, etc. Since we're two houses away from the entrance to the subdivision, daily traffic past our house would increase by a factor of 8 from 16 TPD to 144 TPD. The houses at the Woodbine/Hillview intersection would experience over 125 trips per day more than they do now.

Additionally, because of inadequate width Woodbine narrows into a one-lane street from Hillview to the Landon's way intersection because no-parking signs are not enforced, neighbors' cars are parked the street and snow berms fill up both sides of the street in winter.

Combine these facts and it's clear that there are significant safety issues that would only be compounded by increased traffic.

The obvious solution to these Landons Way / Woodbine / Hillview issues is to continue Landons Way through to Simons Drive, thus providing an alternative ingress/egress to the subdivision. IMEG told us that the grade of the property is too steep to allow access to Simons. That seems very hard to believe. In fact, the developer of the subdivision property also owns the lot at 503 Simons (directly adjacent to the proposed development) which *already* accesses Simons via a driveway. (screenshot #3) The developer may not want to pay for making Landons Way a through street, but the South Hills are composed of streets that have been built to accommodate varying elevations and grades of land. The proposed development itself lies on steep terrain which, per IMEG, would mean "a lot of earth is going to have to be moved" and trees removed to terrace the proposed houses.

3. Access to the High Park Conservation Area

Currently, people who want to access the city owned and maintained trailhead to the High Park Conservation area are able to park in the cul-de-sac at the end of Landons Way. Under the current proposal the only parking would be on the street in front of the houses heading down Landons Way further leading to traffic congestion issues. (screenshots #1 and #3) The current proposal does not address adequate or appropriate trailhead access.

As you can see, there are specific problems about the proposed development as listed above. But beyond practical matters - which we hope are analyzed closely as this proposal is evaluated - we also grieve the loss of the beautiful meadow that the entire extended neighborhood treasures. We regret seeing another bit of within-city-limit open space lost to development. We believe what Tracy Stone-Manning said in her tribute to John Engen: "He understood that the open space surrounding our town ... is not only critical to Missoula's economy but a fundamental part of who we are as Missoulians."

Fair or not, it appears to us and our neighbors and friends that a private property owner can do essentially what they want when proposing a new subdivision in Missoula. Normally, by the time a proposal comes to the City Council it is approved. The perception is that those affected are helpless to have any influence once the wheels of development start rolling. But the developer also has responsibilities when it comes to the impact of their plans on the neighborhood. Please do not "rubber stamp" this proposal because of, to quote senior county planner Tim Worley, "this super-heated housing situation that we find ourselves in." This proposal, as presented to us by IMEG, has significant flaws.

Thank you for considering our comments.
