RE: Trinity Mullan

I've reviewed the location of your housing proposal located at S17, T13 N, R19 W, C.O.S. 4878, PARCEL 2A in Missoula, Montana. Northwestern Energy does currently have electric and gas facilities available in the area that are able to support a new housing complex. Some additional infrastructure will have to be installed before new electric and natural gas services can be connected to Northwestern Energy's distribution system. Please instruct your client to complete a new service application and deliver it to our New Construction desk. Once we've received the signed application, a Northwestern Energy engineer will begin working on a solution to extend three phase primary and a natural gas main to the project site. All electric and natural gas facilities shall be installed according to Northwestern Energy standards and subject to our standard terms and conditions for adding new buildings to our system, also Northwestern Energy is now requiring developers and A&E firms to present their proposed layout of metering locations in a face to face meeting. We will not approve the final location of those facilities until we're able to have his meeting. It's also a good opportunity to discuss other issues critical to the success of your project.

Sincerely,

Erik Loran
