Attn: Mr. Jerry Ellis

Re: Proposal for 2020/2021 and 2021/2022 Valve Rebuild

Dear Mr. Ellis:

The cost to rebuild the forty-four Cla-Val control valves on the list that you sent me for 'Year 1' will be \$35,821.00 and the rebuild for forty-five valves listed as 'Year 2' will be \$36,626.00.

This price includes all repair kits necessary for the main valves and pilot systems. The rebuild consists of a full disassemble and cleaning of the main valve and pilot controls and the replacement of all rubber parts, assembly, testing operation and putting the valve back in service. If any metal parts in the valves or pilot controls require replacement (seat, stem, bearings/guides etc.) they will be billed over and above this quoted price.

If required, Missoula Water shall supply all equipment, additional personnel, and complete any documentation required to meet OSHA regulations for confined space entry as well as supplying any traffic revisions that may be necessary for work in public right-of-way's.

Please let me know if you want to schedule these rebuilds. Thank you, Jerry.

Regards,

*Beau Swet*
